José González

Software & Solutions Architect

From business process to technology in production · Technical Lead · Full Stack

Spain | josegonzalez1989face@gmail.com | +34 613 622 572 | linkedin.com/in/jose-gonzalez-architect

PROFILE

Software architect with **10+ years** turning real business processes into systems that run in production for clients in Spain, Latin America and the US, across banking, marketing, transport, mobility and emergency services. I start by understanding the business: who uses the system, which process it must solve, and what risks and constraints exist. Then I design the solution, plan delivery and coordinate the teams that build it. At **Emergya** (Ayesa Group, Google Cloud Partner) I led the architecture of Publicis' integration platform on GCP, coordinating a team of **four developers** and the integration with other teams' services, and I built the phone prototype of **Blue, BBVA's AI assistant**. My hands-on full-stack background keeps every technical decision realistic, operable and measurable.

HOW I TAKE BUSINESS TO PRODUCTION

1 Understand the business
Processes, stakeholders, functional and non-functional requirements, risks and constraints.

2 Design the solution
Architecture, trade-offs and cost; decisions documented and reversible.

3 Plan and coordinate
Roadmap, sprints, work allocation, standards and cross-team coordination.

4 Run and improve
Cloud, observability, resilience, security and continuous improvement.

CORE COMPETENCIES

Architecture & business	Translating business processes into technical solutions, hexagonal architecture, DDD, CQRS, SOLID, microservices, REST & GraphQL API design, fault-tolerant integrations
Leadership & planning	Technical direction, delivery and sprint planning (Scrum), work allocation and tracking, engineering standards, code review, mentoring and unblocking
Team coordination	Coordination within the development team and across teams (Node.js / Spring Boot backend, mobile, client side), aligning API contracts, dependencies and priorities
Technology	Node.js, TypeScript, NestJS, Express, Spring Boot (integration), PHP / Laravel · React, Next.js, Angular, Vue 3, React Native, Flutter · PostgreSQL, MySQL, SQL Server, MongoDB, BigQuery
Cloud, DevOps & quality	GCP (Workflows, Cloud Logging, BigQuery, Dialogflow CX), AWS (EC2, RDS, ECS, VPC, CloudWatch), Docker, Jenkins, CI/CD · Jest, TDD, OWASP scanning

APPLIED AI

Agentic architecture
AI-agent workflows orchestrated and supervised by people. In my own projects, a chain of agents that takes a business idea to rules, a data model, code and a launch plan. At Emergya, service orchestration with GCP Workflows (state, retries and fault tolerance).

AI-powered assistants
Voice and text conversational assistants for banking: the phone prototype and new features of Blue (BBVA) with Dialogflow CX, Speech-to-Text, Text-to-Speech and a Node.js backend.

AI-assisted engineering
Daily use of AI assistants (Claude Code, ChatGPT) to analyse requirements, design, refactor, generate tests and document, always with human review and team standards.

PROFESSIONAL EXPERIENCE

Software Architect · Emergya · Ayesa Group · Google Cloud Partner

Nov 2024 – Jun 2026

Publicis · Encodify ↔ Workfront integration platform

- **Took the business process to technology**: translated Publicis' marketing content and project-management processes into automated integration flows between Encodify and Workfront.
- **Led the architecture** of the Node.js / NestJS connectors with hexagonal architecture, DDD, CQRS and SOLID in TypeScript.
- **Led and planned the work of a team of four Node.js developers**: task allocation, standards, code review, unit testing and technical unblocking.
- **Coordinated integration across teams**: aligned API contracts and flows between the Spring Boot services and the NestJS connectors, as the solution's technical reference.
- Designed **workflows resilient to failures** of external APIs and services; deployed on **GCP** with **Cloud Logging** for production diagnosis, **OWASP scanning** and Vector with BigQuery for querying.

BBVA · Blue, AI virtual assistant

- Built the **functional prototype of Blue's phone channel** with **Dialogflow CX, Speech-to-Text and Text-to-Speech**, to validate the voice channel.
- Developed **new Blue features**: conversational flows in Dialogflow CX and a Node.js backend, in a regulated banking environment.

Full Stack Developer · Nixi1 · Spain — Sep 2023 – May 2024

B2B platform unifying WhatsApp, Telegram, Instagram, Gmail and other channels through APIs.

- Turned business requirements into the **data model and backend / frontend architecture** of a microservices platform.
- Designed and optimized **third-party API integrations** (messaging, Slack API, RabbitMQ); refactored toward clean code and SOLID with Jest tests.

Stack: Node.js, TypeScript, MongoDB, React, AWS, RabbitMQ

Tech Lead & DevOps · Blob 557 · Dominican Republic — Jan 2023 – Jul 2023

***Caerno**, a mobile app that provides assistance in emergency situations.*

- **Owned the product's technical direction end to end**: from functional and non-functional requirements to the data model and backend and mobile architecture.
- **Led, planned and supervised the development team** in Scrum (sprint planning, tracking and pull-request reviews) and owned code quality.
- Designed the backend with **NestJS and DDD** (REST and GraphQL) for a React Native app and integrated Google Maps, Twilio and Firebase.
- Built the **Development, QA, Staging and Production infrastructure** on AWS with Docker, Jenkins and PM2.

Stack: NestJS, TypeScript, MySQL, GraphQL, React Native, AWS, Docker, Jenkins

Backend Developer · Founders Workshop · United States — Nov 2022 – Jun 2023

- **Designed the backend architecture** of IBIY, a social network, and built its entire API (NestJS, DDD, MySQL, Docker).

Senior Full Stack Developer · Uroff · Chile — Dec 2021 – Oct 2022

Workspace-rental platform operating in Chile and Peru.

- **Developed and released to production** the back office and the public website across the full stack, from data model to UI.
- Built the API layer with **NestJS following DDD** (REST and GraphQL / Apollo) for a **Vue 3** frontend.

Stack: NestJS, Vue 3, MySQL, GraphQL, Docker, Git Flow

Frontend / Backend Developer · 789 · Flotillas · Mexico — Jan 2021 – Feb 2022

- Automated processes between BanBajío bank and the insurers Qualitas and HDI, taking the bank's requirements to production (React, Laravel, SQL Server).

Lead Developer · Proconty · Estoy Fit — Aug 2020 – Sep 2021

- **Led the development team's tasks**; designed the backend and database, a multi-role admin site and the client website (React, Next.js, Laravel, MySQL).
- Integrated the **Pago Medios** payment gateway and configured, secured and deployed the AWS environment.

Tech Lead / Lead Developer · Devesofft · Ecuador — Jan 2018 – Nov 2019

- **Rubí** (rubi.viajes), a B2C and B2B platform for **ticketing, bookings, parcel shipping and billing** for interprovincial bus companies: **led a 6-person team** (3 developers, design and sales) side by side with the owner and investor.
- Started from the business: **market study, field research and interviews** at bus terminals to tackle the bottleneck on holidays and Fridays; UX tailored to passengers, parcels and daily operations.
- Built online sales with **payment gateways**, **real-time seat selection** (sockets), routes and stops on **Google Maps**, live tracking and **external billing** integration, designing for **idempotency and race conditions** to prevent double bookings and double charges.
- **Chose (ADR) a Laravel monolith** scaling horizontally and vertically on AWS (Linux, load balancers, monitoring and logs) to reach production safely with a small team; automated, end-to-end and manual QA.
- **Primus** (primus.ec): **designed the architecture** and deployed a platform to **monitor votes from electoral records** for Ecuador's 2019 elections.

Stack: Laravel, PHP, React, jQuery, Bootstrap, CodeIgniter, Angular, MySQL, Socket.IO, AWS · security against XSS, CSRF and SQL injection

EARLIER EXPERIENCE · 2016 – 2021

Freelance & short engagements (2019 – 2021): Kay Partners, Benefeats (BI dashboard), Menu 20, CTRL, Rolar Cuyo, Hospital Metropolitano. **Co-Founder & Lead Developer**, Quantum World Web (2017). **Web Developer**, Mabuya Soft (2017). **Junior Web Developer**, Inveforca (2016): ERP for private clinics.

OWN PROJECT

Founder & Software Architect · WinWin · App Factory — 2025 – present

Marketplace of paid missions connecting people who need a task done with people who can do it, preparing a closed pilot in Caracas. I define the **business model, MVP scope, pilot plan and architecture** (React / TypeScript, hexagonal NestJS, PostgreSQL + PostGIS, GCP). On top of that architecture I am designing **App Factory**, an AI-agent system that takes a business idea to a data model, code and a launch plan.

EDUCATION

Higher University Technician in Computer Science
Colegio Universitario de Caracas · 2016 – 2017

Computer Science studies
IUT Dr. Federico Rivero Palacio · 2014 – 2015

LANGUAGES

Spanish · native

English · B2
